

ELASTIC BINDER

The Bercomex CRM elastic binder can bind several kinds of flowers. Whether it binds tulips, roses or other flowers, the binder can be universally used.

Extensive tests have shown these binders to be extremely reliable. Therefore this Bercomex machine comes with a half a year - or 750,000 bindings - guarantee on its bindings (provided the Bercomex elastic strings are used).

Characteristics

- Compact measurements
- From loose up to very tight bindings possible
- Can easily bind even the shortest of stems
- For all kinds of flowers
- Insensitive to breakdowns
- False bindings are of no influence to the machine's operation
- No elastic string residue in the machine
- Lightweight
- Corrosion proof parts
- Little maintenance and extremely reliable

Technical Specifications

Measurements	475 x 320 x 700 mm (l x w x h)
Weight	approx. 35 kg
Feeding	200/240V, 1 phase+zero+earth, 50/60Hz
Capacity	Max. 100 strokes per minute

Beside the elastic binder Bercomex also supplies

- Elastic string for Bercomex binders
- Several types of container and bucket filling systems
- Bulb removing machines
- Bercomex Horti systems (a.o. flower processing lines)

Design

This machine can be adjusted for elastic string bindings varying from loose to extremely tight. The binder can be supplied - or built in - either as a separate unit or as part of a flower processing line or chrysanthemum harvester. Thanks to its minimal measurements it is now possible to build in two of these binders, whereas before there was room for only one.

Process

The binder needs little maintenance and has been manufactured out of corrosion proof materials. The machine is lightweight and noiseless. When servicing the machine only a few bolts need to be screwed off: the copper unit can then be easily replaced. Because of a special knotting technique there is no occurrence of elastic residue build up. In case of a false binding, the machine will not go out of order but will continue right at the next stroke.
