

Truss Supports

The truss supports are used in tomato growing industry to support trusses. The quality of the first trusses is always a problem owing to snapping / kinking. The truss support is fastened around the truss stem, lending support and ensuring better fruit quality and increased production.

Bato offers four kinds of truss supports:

The truss supports **HMO 5,5mm and 6mm (standard Horticulture stock item)** have open constructions and are therefore very suitable for the early stages of the growth in which stems need more contact with open air. The **U-model 6mm** is pushed over the stem and gives good support to the truss stem. The **U-model flex 6mm*** is also pushed over the stem, but its flexibility makes it possible to straighten it out and place it more quickly over the stem. The **Hook-model** truss support is attached with its hooks at the end of the stem.

The HMO 5.5 mm truss support is also available in a compostable version.

NB. The truss support HMO 6mm is our standard Horticulture stock item (for easy reference, we call this a 'truss arch'). However all other truss supports are available on request.

Type	Article No.	Colour	Dimensions carton	Pieces / carton	Pieces / pallet
HMO model 5.5 mm	6TBHMS-WT	white	60 X 40 X 33 cm	25,000	750,000
HMO model 6 mm	6TBHMO-WT	white	60 X 40 X 33 cm	20,000	600,000
U model 6 mm	6TBUM-WTN	white	60 X 40 X 33 cm	15,000	450,000
U-model flex 6mm*	6TBUF-WT	white	60 X 40 X 33 cm	15,000	450,000
Hookmodel	6TBHM-WTN	white	60 X 40 X 33 cm	22,000	660,000
HMO-model 5.5 mm BIO	6TBHMO-BAM	ivory	60 X 40 X 33 cm	20,000	600,000
