

For quality granular NPK fertilisers See the **Blaukorn®** range

**COMPO
EXPERT®**

nutrient compositions are oxide ratings

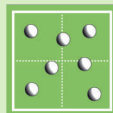

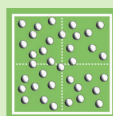

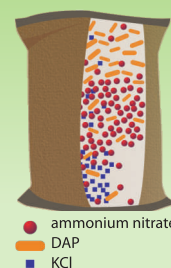

Blaukorn® is a premium quality granular fertiliser for base and side dressings in chlorine-sensitive crops.

- ✓ High solubility
- ✓ Low salinity & very low chlorine (potassium from SOP)
- ✓ Fast acting Nitrogen source with both ammonium and nitrate N
- ✓ Highly available source of phosphate (80 % water-soluble).
- ✓ Includes magnesium, sulphur and micro-nutrients
- ✓ Perfect granulometry (90 % granules within 2–4 mm)
- ✓ Industry leading granule strength
- ✓ Dust free.

The advantages of complex vs blended compounds

Blaukorn® is a premium quality granular complex compound fertiliser. This means that each granule contains the total nutrient package and granules cannot segregate in the bag.

The nutrient distribution in the field is more even and the spreading more accurate. This is further improved by Blaukorn®'s homogenous granulometry of 2-4 mm.

Having a homogenous granule content also improves nutrient efficiency, each part of the root receiving a balanced supply of nutrients.

Blended NPK

• nitrogen
• phosphate

Blaukorn®

• potassium
• complex fertiliser
