

# Feeling sluggish?

## Get your slug & snail control programme prepared

### Mesuro! Pro®

A highly effective bait that controls all species of slugs and snails and works in all weather. Made using high quality production techniques, Mesuro! Pro® baits are small, even in size and very resistant to mould and abrasion, giving consistent mechanical properties, even spread patterns in the paddock, more baiting points and reduced dust.

### SlugOut®

The SlugOut® granular bait contains 18 g/kg metaldehyde, all of it being in the edible outer coating. The granules were designed to be small to provide better coverage per m<sup>2</sup> and they remain highly effective and mould free in New Zealand weather conditions.

### Slug-em™ by Biotelliga

Slug-em™ is a new registration with no with-holding period. This convenient liquid formulation contains a natural tea saponin and can be used directly on the plant for extremely fast results.
