

Are you prepared for extreme heat?

Help your crop cope with summer

WUXAL Amino

One of the ways plants cope with environmental stress, like drought, is by accumulating amino acids. External application of amino acids will assist this natural response and will reduce the energy wasted by the plant on synthesizing such high energy compounds. Wuxal Amino is a BioGro registered product that contains 54% amino acids that are readily absorbed through pores in cuticles and through stomata and are immediately available for sustaining plant metabolism.

WUXAL Ascofol

Ascophyllum nodosum, a kelp rich in micro-nutrients and naturally occurring bioactive components, stimulating the plant's growth and natural defences against stress-related conditions. Wuxal Ascofol is a highly concentrated suspension of *Ascophyllum nodosum* that is easy to handle, adheres well on foliage and has optimum pH-value for increased absorption.
