

# Our soft options

## We call them soft but they hit hard!

Our soft options are safe and easy to use and don't require any withholding period. When used at the first sign of infestation, they are a great tool to manage whitefly and don't encourage insect resistance..

- **NeemAQ** a unique, soluble concentrate formulation of neem which affects feeding, and growth and development of insect pests established on treated plants. NeemAQ assists in the control of greenhouse whitefly, caterpillars, aphids and thrips.
- **Eco-Oil®** a botanical oil concentrate specifically for the control of two-spotted mite, aphids, whitefly and scale. Eco-Oil® is a safe knock-down insecticide with no systemic activity that also has some residual activity due to its repellent effects and ovicidal action. BioGro certified.
- **Agri-50NF** is based on the properties of natural plant extracts to form a sticky layer able to entrap small insect pests and is compatible with IPM and biological control strategies. It is an excellent resistance management tool for control of aphids, scale, whitefly, psyllids and two spotted mite.
