

# Our tips and advice to Improve your greenhouse environment

## Selecting the right coating with ReduWizard

ReduWizard allows you to compile a custom advice for 18 types of vegetable plants and over 50 types of ornamental plants. The tool is linked to an international database of climate info from 3,000 locations. Based on a smart calculation model, the ReduWizard generates a customised advice - free of charge.

## Always a clean greenhouse

Good light transmission is critical all year round, but especially in those winter months. ReduClean® and GS-4® are two safe ways to ensure your greenhouse is spotless.

## Reduced condensation

Large droplet can result in 8% light loss. AntiCondens forms a coating that prevents their formation, for increased light transmission and less disease problems.

***Talk to your local representative for more tips and advice on how to improve your greenhouse environment and maintain plant balance through the winter months.***
