

Water stains? Don't get any rejects this year!

Water stains can be challenging to remove. In theory, a mild acidic solution should be all that is needed to get rid of these marks, but the hairiness of the fruit makes the task much harder. Surfactants and wetters are then required to get the product right down to the skin surface, with all the mixing and foam involved.

Our range of Zespri approved stain removers can make your job a whole lot easier and result in a clean and bright fruit at packing:

- Kiwi Sheen CP is a low cost, yet effective Phosphoric acid based option that performs very well, even in wet conditions, with a superior end result to Citric acid.
- Kiwi Stainoff LF is a gentle Lactic acid option for stubborn staining. Its unique buffered low foam formulation means easy mixing and no need for additional wetters or surfactants. It also provides long term protection, including during storage.

Talk to your local representative to discuss the best option for your situation.
