

Reduce transplanting stress with **WUXAL® Aminoplant**

Transplanting is an extremely stressful event for plants. They need to adjust to their new environment and grow a lot of new, strong roots.

Wuxal® Aminoplant enhances root development due to its high concentration of amino acids and other bioactive compounds. It also helps with stress recovery by stimulating the natural plant defences against stress-related conditions. This makes it particularly useful for improving survival after transplanting.

- Premium quality biostimulant obtained from natural plant extracts
- Gentle but efficient extraction technology preserves the biological activity of the active ingredients
- High concentration of amino acids and bioactive compounds
- Foliar and root absorption
- Extraordinary rainfastness and wetting properties: can be used as a spray adjuvant to pesticides
- Biological buffering system.
