

Post harvest treatments

Think beyond harvest with **WUXAL® 39N**

Wuxal® 39N is a highly concentrated foliar fertiliser particularly suited for post harvest treatments to kiwifruit crops. It helps increase nutrient uptake and storage, which improves flower buds in the following season.

- Highly concentrated nitrogen fertiliser solution (39% w/v).
- Excellent ratio between different nitrogen carriers (19.5% ureic nitrogen, 9.75% ammoniacal nitrogen and 9.75% nitrate nitrogen).
- Extremely high absorption rate.
- Safe - low biuret content (max 0.52%). Biuret is an impurity that can cause plant damage.
- Promotes early growth.
- Particularly suited for post harvest fertilisation.
- Ease of handling and application.

Recommended timing and rate of application: Must be applied after fruit harvest. 1-2 applications @ 15-20 L/ha.
