

# Think beyond harvest with **WUXAL® 39N+**

The majority of fruit drop has occurred and there is now a clearer indication that next year's crop load will be high. As we approach winter, ensuring your trees have enough resources for the big season ahead has never been more important.

Wuxal® 39N+ is a highly concentrated foliar fertiliser with all required micronutrients, particularly suited for post harvest treatments to avocado crops. It helps increase nutrient uptake and storage, which improves leaf health, flower buds and crop yield in the following season.

- Highly concentrated nitrogen fertiliser solution (30% w/w).
- High N recovery rates, even under dry conditions.
- Well balanced micronutrient supply including Boron, Copper, Iron, Manganese, Molybdenum and Zinc.
- Nutrients readily available to the plant with fully chelated micronutrients
- High crop safety with its low biuret content. Biuret is an impurity that can cause plant damage.
- Ease of handling and application.

**WUXAL®**
