

# ReduCoat<sup>®</sup>

## ***Structural paint for plastic greenhouses***

ReduCoat is the ideal paint to protect plastic film against wear due to excessive heat in areas where the plastic film comes into contact with metal components

### **Advantages:**

- Excellent coverage and great reflective power.
- Contains microscopically divided pigment.
- Extremely UV-stable and therefore highly resistant to wear.
- Flexible.
- Will not erode plastic film.
- Water-based, safe for humans and for the environment.

In countries with high light intensities, the temperature of plastic film may increase significantly on surfaces where the plastic film comes into contact with the metal structure, causing the plastic film to wear prematurely.

### **Dosage ReduCoat**

One 16-litre bucket is sufficient for 250 to 300 square metres or a band of 2,500 to 3,000 meters with a width of 10 cm.
